

Question 1

|              |          |          |          |          |          |          |          |          |          |          |
|--------------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|
| <b>Row 1</b> | <b>0</b> | <b>1</b> | <b>2</b> | <b>3</b> | <b>4</b> | <b>5</b> | <b>6</b> | <b>7</b> | <b>8</b> | <b>9</b> |
| <b>Row 2</b> |          |          |          |          |          |          |          |          |          |          |

Fill in the boxes in row2 such that if there is a number underneath the corresponding number in row1, then there will be that many occurrences of that number in row2.

Eg if there was a 9, in row 2, underneath the 8 in row1, then there would be nine occurrences of 8 in row2.

Question 2

A man is pushing a car and comes to a hotel. Immediately he decides that he is bankrupt. What is happening?
